Subject Index

Acetylcholine receptors (AChRs)
Recombinant neuromuscular synapses 671.
Actin
Rho, rac and the actin cytoskeleton 777.
The genetic control of tissue polarity in *Drosophila* 735.
Who discovered actin? 57.
Actin genes
Direct-developing sea urchins and the evolutionary reorganization of early development 211.
Activin
Mesoderm induction and axis determination in *Xenopus laevis* 687.
Acylation
E.coli hemolysin interactions with prokaryotic and eukaryotic cell membranes 519.
Adaptor proteins
The mechanism of receptor-mediated endocytosis: More questions than answers 589.
Adhesion molecules
Myelin Po-protein, more than just a structural protein? 541.
Ageing
The aging pineal gland and its physiological consequences 169.
Aggregulons
Evolution and development: Crete, 14-20 October 289.
***Albino* deletions**
Mouse albino deletions: From genetics to genes in development 831.
Alchohol dehydrogenase
Transgenic animal studies on the evolution of genetic regulatory circuitries 237.
Alzheimer's Disease
Alzheimer's disease untangled 727.
***amber* mutants**
Assembly of a complex bacteriophage *in vitro* 635.
Amoebal aggregation
Streamer F mutants and chemotaxis of *Dictyostelium* 473.
AMP-activated protein kinases
AMP-activated protein kinase - an archetypal protein kinase cascade? 699.
β-Amyloid
Alzheimer's disease untangled 727.
Anaesthetics
Dynamic lipid-bilayer heterogeneity: A mesoscopic vehicle for membrane function? 129.
Angiotensin
High blood pressure: hunting the genes 37.
Anion exchange
The molecular and cell biology of anion transport by bacteria 757.
α_1- Antitrypsin
Transgenic animal studies on the evolution of genetic regulatory circuitries 237.
Arabidopsis
The plant hormone auxin: Insight in sight 439.
ARS elements
A protein complex present at origins of DNA replication in yeast cells 561.
Chromatin replication 1.
On the nature of origins of DNA replication in eukaryotes 661.
Ascidian development
Evolution of alternate modes of development in ascidians 219.
Astrocytes
What have tissue culture studies told us about the development of oligodendrocytes? 693.
Auxins
Auxin-binding proteins and their possible roles in auxin-mediated plant cell growth 43.
The plant hormone auxin: Insight in sight 439.

Bacterial metabolism
The molecular and cell biology of anion transport by bacteria 757.
Bacteriophage T4
Assembly of a complex bacteriophage *in vitro* 635.
DNA precursor asymmetries, replication fidelity, and variable genome evolution 295.
Behaviour
The sex-peptide 779.
Bithorax complex
Origins of the gonadal mesoderm in *Drosophila* 627.
Position-effect variegation and chromatin proteins 605.
Bloom's syndrome
Cancer predisposition in Bloom's syndrome 333.
Bombyx mori
How do germ cells choose their sex? *Drosophila* as a paradigm 513.

Ca^{2+}-binding sites
Is calpain activity regulated by membranes and autolysis or by calcium and calpastatin? 549.
Cadherin
Phylogenetic analysis of the cadherin superfamily 743.
The molecular biology of desmosomes and hemidesmosomes: 'What's in a name?' 385.
Caenorhabditis elegans
From cell fates to morphology: Developmental genetics of the *Caenorhabditis elegans* male tail 309.
Genes controlling specific cell fates in *C. elegans* embryos 705.
Genetic sex determination mechanisms and evolution 253.
Redundancies, development and the flow of information 263.
Reverse genetics of *Caenorhabditis elegans* 629.
The roles of SH2/SH3 domains in nematode development 481.
Calcium
Oscillations and waves of cytosolic calcium: Insights from theoretical models 485.
Calpain
Is calpain activity regulated by membranes and autolysis or by calcium and calpastatin? 549.
Calpastatin
Is calpain activity regulated by membranes and autolysis or by calcium and calpastatin? 549.
Cancer
Cancer predisposition in Bloom's syndrome 333.
Methylation, mutation and cancer 33.
Mucins: Structure, function, and associations with malignancy 619.
p53 loss of function: Implications for the processes of immortalization and tumorigenesis 557.
The function of melanin or six blind people examine an elephant 49.

Why do cancer cells metastasize into particular organs? 185.
cdc2 kinase
Regulation of meiotic maturation in the mammalian oocyte: Interplay between exogenous cues and the microtubule cytoskeleton 97.
Cell adhesion
Phylogenetic analysis of the cadherin superfamily 743.
Cell adhesion molecules
The molecular biology of desmosomes and hemidesmosomes: 'What's in a name?' 385.
Cell cycle
DNA synthesis control in yeast: An evolutionarily conserved mechanism for regulating DNA synthesis genes? 823.
Mammalian origins of replication 651.
Regulation of meiotic maturation in the mammalian oocyte: Interplay between exogenous cues and the microtubule cytoskeleton 97.
Reversible histone modifications and the chromosome cell cycle 9.
Cell differentiation
All animals develop from a blastula: Consequences of an undervalued definition for thinking on development 573
Differentiation and proliferation in mouse embryonal carcinoma cells 769.
HNF1, a homeoprotein member of the hepatic transcription regulatory network 579.
What have tissue culture studies told us about the development of oligodendrocytes? 693.
Cell fate determination
From cell fates to morphology: Developmental genetics of the *Caenorhabditis elegans* male tail 309.
Genes controlling specific cell fates in *C. elegans* embryos 705.
Cell fusion
Use of the HPRT gene and the HAT selection technique in DNA-mediated transformation of mammalian cells: First steps toward developing hybridoma techniques and gene therapy 495.
Cell growth
p53 loss of function: Implications for the processes of immortalization and tumorigenesis 557.
The biology of hepatocyte growth factor/scatter factor 613.
Thy-1, the enigmatic extrovert on the neuronal surface 715.
Cell lineage
Direct-developing sea urchins and the evolutionary reorganization of early development 211.
Evolution of alternate modes of development in ascidians 219.
From cell fates to morphology: Developmental genetics of the *Caenorhabditis elegans* male tail 309.
Genes controlling specific cell fates in *C. elegans* embryos 705.
What have tissue culture studies told us about the development of oligodendrocytes? 693.
Cell membranes
Auxin-binding proteins and their possible roles in auxin-mediated plant cell growth 43.
Dynamic lipid-bilayer heterogeneity: A mesoscopic vehicle for membrane function? 129.
E.coli hemolysin interactions with prokaryotic and eukaryotic cell membranes 519.
Membrane protein insertion into the endoplasmic reticulum - another channel tunnel? 535.
Cell motility
The biology of hepatocyte growth factor/scatter factor 613.
Why do cancer cells metastasize into particular organs? 185.
Cell movement
Rho, rac and the actin cytoskeleton 777.
Cell transplantation
Cell transplantation and gene therapy in muscular dystrophy 641.
Cell-cell interactions
Genes controlling specific cell fates in *C. elegans* embryos 705.
The selectin family of carbohydrate-binding proteins: Structure and importance of carbohydrate ligands for cell adhesion 849.
Central nervous system
Retinoic acid and development of the central nervous system 431.
Chaperonins
Control of steroid receptor function and cytoplasmic-nuclear transport by heat shock proteins 841.
Membrane protein insertion into the endoplasmic reticulum - another channel tunnel? 535.
Mitochondrial DNA and genetic disease 763.
Protein translocation across mitochondrial membranes 17.
Chemotaxis
Chemosensory behaviour of *Tetrahymena* 61.
Streamer F mutants and chemotaxis of *Dictyostelium* 473.
Chick development
The vertebrate limb: A model system to study the *Hox*/HOM gene network during development and evolution 375.
Cholesterol
Dynamic lipid-bilayer heterogeneity: A mesoscopic vehicle for membrane function? 129.
Chromatin structure
Chromatin replication 1.
Polycomb and friends 411.
Position-effect variegation and chromatin proteins 605.
Reversible histone modifications and the chromosome cell cycle 9.
Sex-chromosome pairing and activity during mammalian meiosis 817.
The interaction of transcription factors with nucleosomal DNA 597.
Chromosome movement
Chromosome motion in mitosis 73.
Molecular components of the mitotic spindle 81.
Chromosomes
My favorite cytological subject: Chromosomes 785.
Cilia
Chemosensory behaviour of *Tetrahymena* 61.
Ciliates
Cutting, splicing, reordering and elimination of DNA sequences in hypotrichous ciliates 317.
Circadian rhythms
The aging pineal gland and its physiological consequences 169.
Clathrin
The mechanism of receptor-mediated endocytosis: More questions than answers 589.
Cleavage
Direct-developing sea urchins and the evolutionary reorganization of early development 211.
Coated pits
The mechanism of receptor-mediated endocytosis: More questions than answers 589.
Codon usage
Evolution of mitochondrial genomes and the genetic code 709.
Collagen
The matrix-degrading metalloproteinases 455.

Colony stimulating factors (CSF)
The hemopoietic regulators - An embarrassment of riches 799.
Co-evolution
Observing development through evolutionary eyes: A practical approach 281.
α-crystallin gene
Mouse models of human single gene disorders: I Non-transgenic mice 359.
Cyclic AMP
Streamer F mutants and chemotaxis of *Dictyostelium* 473.
Cyclic GMP
Streamer F mutants and chemotaxis of *Dictyostelium* 473.
Cytokines
Role of interleukin 5 receptor system in hematopoiesis: Molecular basis for overlapping function of cytokines 527.
The matrix-degrading metalloproteinases 455.
Cytoskeleton
All animals develop from a blastula: Consequences of an undervalued definition for thinking on development 573
Control of steroid receptor function and cytoplasmic-nuclear transport by heat shock proteins 841.
Molecular movements in oocyte patterning and pole cell differentiation 507.
Recombinant neuromuscular synapses 671.
Rho, rac and the actin cytoskeleton 777.
Streamer F mutants and chemotaxis of *Dictyostelium* 473.
The microtubule-organizing centre 861.
C-*jun*
Differentiation and proliferation in mouse embryonal carcinoma cells 769.
c-*met*
The biology of hepatocyte growth factor/scatter factor 613.

Darwin, Charles
Ontogeny and phylogeny - Revisited and reunited 275.
Databases
Does protein structure determine amino acid sequence? 407.
Deoxnucleotide triphosphate (dNTP) pools
Biological asymmetries and the fidelity of eukaryotic DNA replication 303.
DNA precursor asymmetries, replication fidelity, and variable genome evolution 295.
Desmosomes
The molecular biology of desmosomes and hemidesmosomes: 'What's in a name?' 385.
Development - Reconstruction of databases
A real mouse for your computer 501.
Dictyostelium discoideum
Streamer F mutants and chemotaxis of *Dictyostelium* 473.
Dihydrofalate reductase (DAFR)
Mammalian origins of replication 651.
Disulphide bonds
Protein folding pathways determined using disulphide bonds 195.
DNA binding proteins
DNA triple-helix formation: An approach to artificial gene repressors? 807.
DNA polymerase
Accessory protein function in the DNA polymerase III holoenzyme from *E. coli* 105.
Biological asymmetries and the fidelity of eukaryotic DNA replication 303.
Mutation rates 137.
DNA rearrangements
Cancer predisposition in Bloom's syndrome 333.
Cutting, splicing, reordering and elimination of DNA sequences in hypotrichous ciliates 317.
DNA replication
A protein complex present at origins of DNA replication in yeast cells 561.
Accessory protein function in the DNA polymerase III holoenzyme from *E. coli* 105.
Biological asymmetries and the fidelity of eukaryotic DNA replication 303.
Chromatin replication 1.
DNA precursor asymmetries, replication fidelity, and variable genome evolution 295.
DNA synthesis control in yeast: An evolutionarily conserved mechanism for regulating DNA synthesis genes? 823.
Mammalian origins of replication 651.
My favorite cytological subject: Chromosomes 785.
On the nature of origins of DNA replication in eukaryotes 661.
DNA structure
DNA triple-helix formation: An approach to artificial gene repressors? 807.
On the nature of origins of DNA replication in eukaryotes 661.
Reversible histone modifications and the chromosome cell cycle 9.
The interaction of transcription factors with nucleosomal DNA 597.
DNA transformation
Use of the HPRT gene and the HAT selection technique in DNA-mediated transformation of mammalian cells: First steps toward developing hybridoma techniques and gene therapy 495.
dorsal
The rel family of proteins 89.
Dosage compensation
Genetic sex determination mechanisms and evolution 253.
Drosophila
Boris Ephrussi - His work in genetics 347.
Cloning of the genes for excitatory amino acid receptors 465.
Control of transcription of *Drosophila* retrotransposons 161.
Evolution of the vertebrate *Hox* homeobox genes 245.
Genetic sex determination mechanisms and evolution 253.
Homeobox genes in vertebrate evolution 267.
How do germ cells choose their sex? *Drosophila* as a paradigm 513.

Plasma proteins
Fetuin - an old friend revisited 749.
Platelet derived growth factor (PDGF)
What have tissue culture studies told us about the development of oligodendrocytes? 693.
Po protein
Myelin Po-protein, more than just a structural protein? 541.
Pole plasm
Molecular movements in oocyte patterning and pole cell differentiation 507.
Polyadenylation
The end of the message: 3′-end processing leading to polyadenylated messenger mRNA 113.
What determines the instability of c-*myc* proto-oncogene mMRNA? 119.
Polycomb
Polycomb and friends 411.
Poly(ADP-ribose) polymerase
Cancer predisposition in Bloom's syndrome 333.
Position effect variegation
Position-effect variegation and chromatin proteins 605.
Post-translational modification
Regulatory mechanisms for *ras* proteins 177.
The prenylation of proteins 25.
Prenylation
The prenylation of proteins 25.
Promoter structure
DNA synthesis control in yeast: An evolutionarily conserved mechanism for regulating DNA synthesis genes? 823.
Protein folding
Control of steroid receptor function and cytoplasmic-nuclear transport by heat shock proteins 841.
Does protein structure determine amino acid sequence? 407.
Protein kinases
AMP-activated protein kinase - an archetypal protein kinase cascade? 699.
Protein phosphorylation
Regulatory mechanisms for *ras* proteins 177.
Protein secretion
E.coli hemolysin interactions with prokaryotic and eukaryotic cell membranes 519.
Protein structure
Complementation in β-galactosidase: From protein structure to genetic engineering 201.
Does protein structure determine amino acid sequence? 407.
How the EcoRI endonuclease recognizes and cleaves DNA 445.
Mucins: Structure, function, and associations with malignancy 619.
Protein folding pathways determined using disulphide bonds 195.
Structure and evolution of insulins: Implications for receptor binding 325.
The homeodomain: A new face for the helix-turn-helix? 145.
The matrix-degrading metalloproteinases 455.
The molecular biology of desmosomes and hemidesmosomes: 'What's in a name?' 385.
The rel family of proteins 89.
Protein targeting
Membrane protein insertion into the endoplasmic reticulum - another channel tunnel? 535.
Protein translocation across mitochondrial membranes 17.
Sorting of proteins to the vacuoles of plant cells 151.
Protein translocation
Membrane protein insertion into the endoplasmic reticulum - another channel tunnel? 535.
Protein (DNA interaction)
DNA triple-helix formation: An approach to artificial gene repressors? 807.
Proteinases
Is calpain activity regulated by membranes and autolysis or by calcium and calpastatin? 549.
Protein-carbohydrate interaction
The selectin family of carbohydrate-binding proteins: Structure and importance of carbohydrate ligands for cell adhesion 849.
Proteolytic processing
Alzheimer's disease untangled 727.
Compartmentalized transcription and the establishment of cell type during sporulation in *Bacillus subtilis* 125.
Proton pumps
The molecular and cell biology of anion transport by bacteria 757.

Rac protein
Rho, rac and the actin cytoskeleton 777.
Radiation effects
The function of melanin or six blind people examine an elephant 49.
Ras proteins
The prenylation of proteins 25.
ras
Regulatory mechanisms for *ras* proteins 177.
Receptors
Auxin-binding proteins and their possible roles in auxin-mediated plant cell growth 43.
Cloning of the genes for excitatory amino acid receptors 465.
The plant hormone auxin: Insight in sight 439.
The roles of SH2/SH3 domains in nematode development 481.
Receptor-ligard interactions
Role of interleukin 5 receptor system in hematopoiesis: Molecular basis for overlapping function of cytokines 527.
Structure and evolution of insulins: Implications for receptor binding 325.
Receptor-mediated endocytosis
The mechanism of receptor-mediated endocytosis: More questions than answers 589.
Regulatory mechanisms
Induction mechanism of a single gene molecule: Stochastic or deterministic 341.
Regulatory systems
Evolution of the vertebrate *Hox* homeobox genes 245.
Genetic sex determination mechanisms and evolution 253.
Redundancies, development and the flow of information 263.
Transgenic animal studies on the evolution of genetic regulatory circuitries 237.
Rel proteins
The rel family of proteins 89.
Renin
High blood pressure: hunting the genes 37.

Repetitive sequences
My favorite cytological subject: Chromosomes 785.
Replication origins
A protein complex present at origins of DNA replication in yeast cells 561.
Mammalian origins of replication 651.
On the nature of origins of DNA replication in eukaryotes 661.
Repressors
DNA triple-helix formation: An approach to artificial gene repressors? 807.
Restriction endonucleases
How the EcoRI endonuclease recognizes and cleaves DNA 445.
Retinoic acid
Retinoic acid and development of the central nervous system 431.
The vertebrate limb: A model system to study the *Hox*/HOM gene network during development and evolution 375.
Retinoic acid receptors
Differentiation and proliferation in mouse embryonal carcinoma cells 769.
Retrotransposons
Control of transcription of *Drosophila* retrotransposons 161.
Reverse genetics
Reverse genetics of *Caenorhabditis elegans* 629.
rho protein
Rho, rac and the actin cytoskeleton 777.
Ribosonal RNA genes
Observing development through evolutionary eyes: A practical approach 281.
RNA polymerase
Compartmentalized transcription and the establishment of cell type during sporulation in *Bacillus subtilis* 125.
RNA processing
The end of the message: 3′-end processing leading to polyadenylated messenger mRNA 113.
RNA-binding proteins
RNA-binding proteins: Masking proteins revealed 337.

Saccharomyces cerevisiae
Boris Ephrussi - His work in genetics 347.
DNA synthesis control in yeast: An evolutionarily conserved mechanism for regulating DNA synthesis genes? 823.
On the nature of origins of DNA replication in eukaryotes 661.
Pheromone response in yeast 367.
Protein translocation across mitochondrial membranes 17.
Reversible histone modifications and the chromosome cell cycle 9.
The end of the message: 3′-end processing leading to polyadenylated messenger mRNA 113.
The prenylation of proteins 25.
Scaffold associated regions (SARs)
On the nature of origins of DNA replication in eukaryotes 661.
Scatter factor
The biology of hepatocyte growth factor/scatter factor 613.
Schizosaccharomyces pombe
DNA synthesis control in yeast: An evolutionarily conserved mechanism for regulating DNA synthesis genes? 823.
Schwann cells
Myelin Po-protein, more than just a structural protein? 541.
Role of macrophages in peripheral nerve degeneration and repair 401.
Sea urchin development
Direct-developing sea urchins and the evolutionary reorganization of early development 211.
Secretory pathways
Sorting of proteins to the vacuoles of plant cells 151.
Selectins
The selectin family of carbohydrate-binding proteins: Structure and importance of carbohydrate ligands for cell adhesion 849.
Sex chromosomes
Sex-chromosome pairing and activity during mammalian meiosis 817.
Sex determination
Genetic sex determination mechanisms and evolution 253.
How do germ cells choose their sex? *Drosophila* as a paradigm 513.
Sex lethal (Sxl)
How do germ cells choose their sex? *Drosophila* as a paradigm 513.
Sex-peptide
The sex-peptide 779.
SH domains
The roles of SH2/SH3 domains in nematode development 481.
Sialyation
The selectin family of carbohydrate-binding proteins: Structure and importance of carbohydrate ligands for cell adhesion 849.
Sigma factors
Compartmentalized transcription and the establishment of cell type during sporulation in *Bacillus subtilis* 125.
Signal sequences
E.coli hemolysin interactions with prokaryotic and eukaryotic cell membranes 519.
Membrane protein insertion into the endoplasmic reticulum - another channel tunnel? 535.
Signal transduction
Pheromone response in yeast 367.
The roles of SH2/SH3 domains in nematode development 481.
Somatic cell genetics
Contributions of Boris Ephrussi to the development of somatic cell genetics 349.
Use of the HPRT gene and the HAT selection technique in DNA-mediated transformation of mammalian cells: First steps toward developing hybridoma techniques and gene therapy 495.
Speciation
Observing development through evolutionary eyes: A practical approach 281.
Sporulation
Compartmentalized transcription and the establishment of cell type during sporulation in *Bacillus subtilis* 125.
START
DNA synthesis control in yeast: An evolutionarily conserved mechanism for regulating DNA synthesis genes? 823.
Stem cells
Hydra moves! 67.
Steroid receptors
Control of steroid receptor function and cytoplasmic-nuclear transport by heat shock proteins 841.
Sugar transport
The molecular basis of the type 1 glycogen storage diseases 395.
Superfamily
Myelin Po-protein, more than just a structural protein? 541.

Synapses
Recombinant neuromuscular synapses 671.
Szent-Gyorgi, A.
Who discovered actin? 57.

Tetrahymena
Chemosensory behaviour of *Tetrahymena* 61.
The microtubule-organizing centre 861.
TFIIIA
The interaction of transcription factors with nucleosomal DNA 597.
Thy-1
Thy-1, the enigmatic extrovert on the neuronal surface 715.
Tissue differentiation
Transgenic animal studies on the evolution of genetic regulatory circuitries 237.
Tissue polarity
The genetic control of tissue polarity in *Drosophila* 735.
Transcriptional regulation
Auxin-binding proteins and their possible roles in auxin-mediated plant cell growth 43.
Chromatin replication 1.
Compartmentalized transcription and the establishment of cell type during sporulation in *Bacillus subtilis* 125.
Control of transcription of *Drosophila* retrotransposons 161.
Differentiation and proliferation in mouse embryonal carcinoma cells 769.
DNA triple-helix formation: An approach to artificial gene repressors? 807.
Evolution and development: Crete, 14-20 October 289.
HNF1, a homeoprotein member of the hepatic transcription regulatory network 579.
Induction mechanism of a single gene molecule: Stochastic or deterministic 341.
Sex-chromosome pairing and activity during mammalian meiosis 817.
The interaction of transcription factors with nucleosomal DNA 597.
The rel Family of Proteins 89.
Transgenic animal studies on the evolution of genetic regulatory circuitries 237.
What determines the instability of c-*myc* proto-oncogene mMRNA? 119.
Translation
Evolution of mitochondrial genomes and the genetic code 709.
Transmembrane proteins
Recombinant neuromuscular synapses 671.
The genetic control of tissue polarity in *Drosophila* 735.
The molecular and cell biology of anion transport by bacteria 757.
Transport proteins
The molecular and cell biology of anion transport by bacteria 757.
Transposable elements
Barbara McClintock, 1902-1992 791.
Control of transcription of *Drosophila* retrotransposons 161.
Reverse genetics of *Caenorhabditis elegans* 629.
The origin of P elements in *Drosophila melanogaster* 681.
Tumor suppressors
p53 loss of function: Implications for the processes of immortalization and tumorigenesis 557.
Tumour suppressor genes
Methylation, mutation and cancer 33.
Tyrosine kinases
Regulatory mechanisms for *ras* proteins 177.
The roles of SH2/SH3 domains in nematode development 481.

Ultrabiothorax
Polycomb and friends 411.

Vaccines
Mucins: Structure, function, and associations with malignancy 619.
Vacuoles
Sorting of proteins to the vacuoles of plant cells 151.
Vertebrate development
Homeobox genes in vertebrate evolution 267.

Waddington, Conrad
From cell fates to morphology: Developmental genetics of the *Caenorhabditis elegans* male tail 309.
***Wnt* genes**
Mesoderm induction and axis determination in *Xenopus laevis* 687.

Xenopus laevis
Mesoderm induction and axis determination in *Xenopus laevis* 687.
On the nature of origins of DNA replication in eukaryotes 661.
RNA-binding proteins: Masking proteins revealed 337.
The end of the message: 3′-end processing leading to polyadenylated messenger mRNA 113.

Zebrafish
Retinoic acid and development of the central nervous system 431.
